BEAVERTON, OR December 14, 2006—Cipher Systems, Inc. today announced the confirmation of its registration for the ISO 9001:2000 certification. As part of its continuing corporate quality program, Cipher Systems recently received registration for ISO 9001:2000 certification by Quality Management Institute (QMI). An ISO certification represents an industry-recognized level of quality and service that enables customers to be confident in their decision to partner with Cipher Systems. This new version of the ISO quality standard places greater accountability on executive management's involvement and measurable quality objectives in the Quality System. Additionally, the audit for compliance with the standard now examines the extent to which a company's Quality System contains customer-focused elements, including understanding needs, meeting requirements, keeping customers informed and measuring satisfaction.

The achievement was a direct result of the entire organization working together in effectively developing and maintaining the Quality System in order to be registered. Cipher Systems is committed to providing the highest level of customer satisfaction and quality. "We are demonstrating our complete focus on meeting customer requirements and on striving to continually improve our products and processes," said Brian Bishop, President of Cipher Systems. "ISO has reinforced Cipher Systems company-wide commitment to quality, continual process improvement, and complete customer satisfaction."

About ISO

The ISO (International Organization for Standardization) is the source of the ISO 9000 and ISO 14000 families of quality and environmental management standards and some 14 000 International Standards for business, government and society. ISO is a network of national standards institutes from more than 140 countries working in partnership with international organizations, governments, industry, business and consumer representatives.
